

## Multi-Outlet Sets of compensating Pot-Drippers, Products and Applications

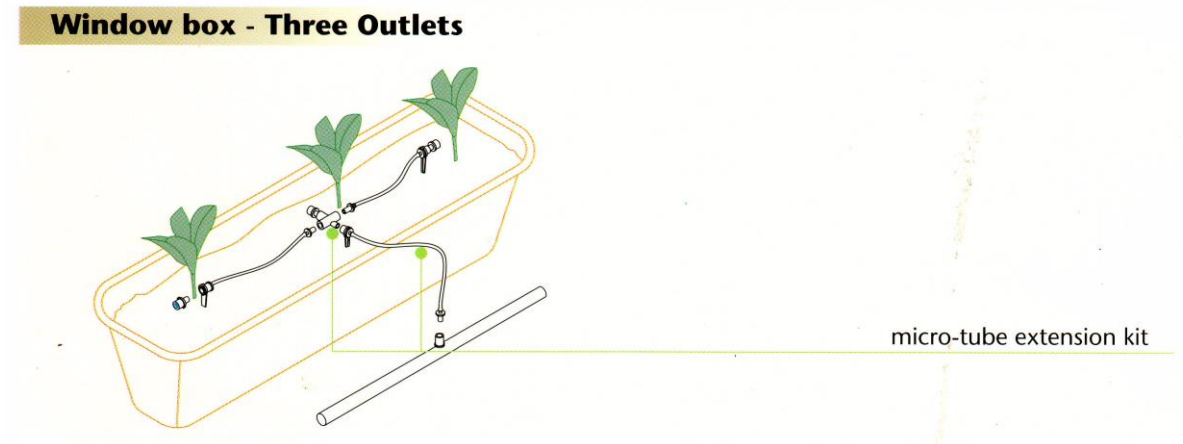

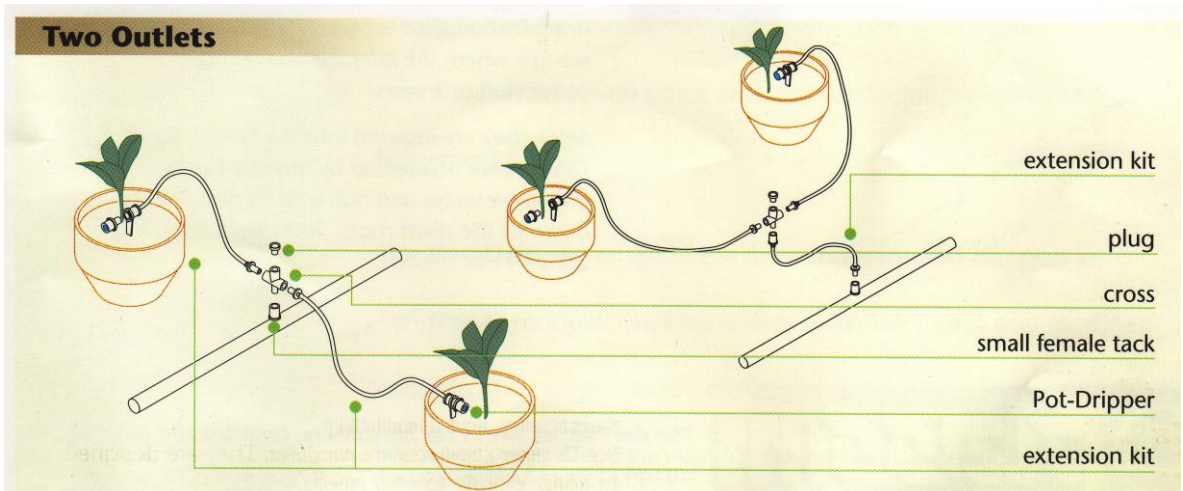

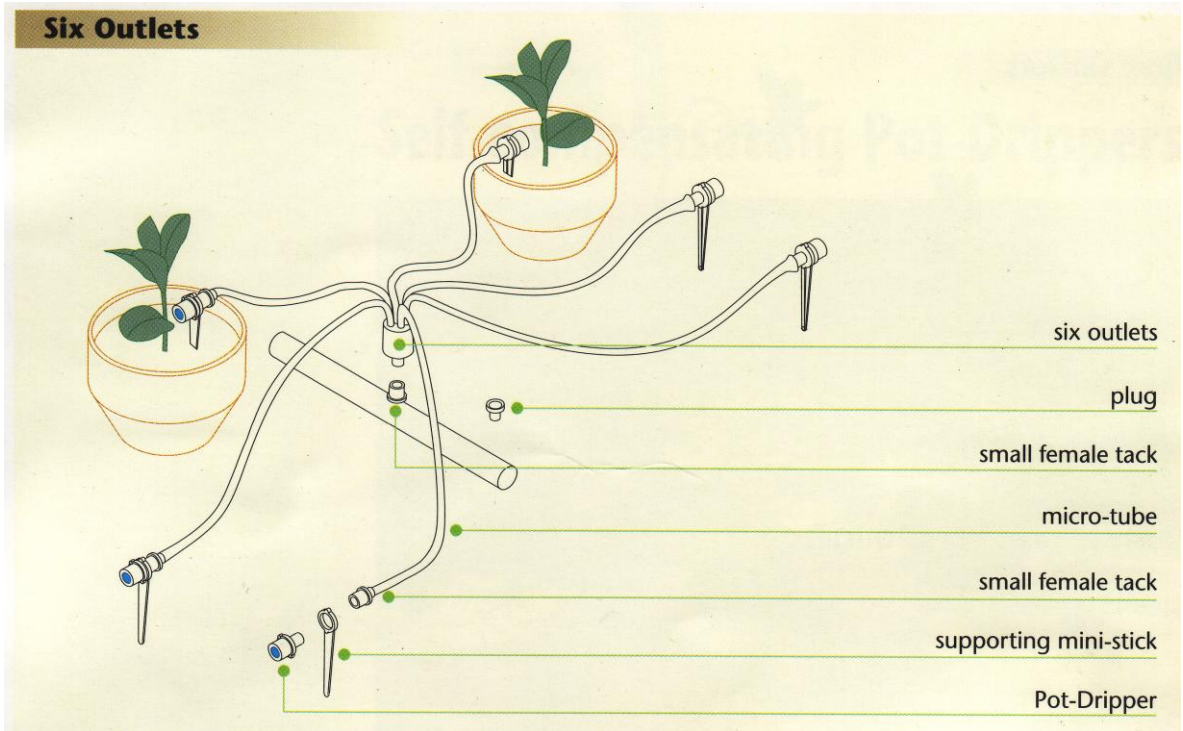

Rain-Tal Ltd presents unique sets of **Multi-Outlet Pot-Dripper** made with 4 mm PVC micro-tubes and available in 4 and 6 outlets, 60 or 100 cm long. This product range is highly adaptable and is ideally suited for numerous applications such as, nurseries, gardens, greenhouses and even office and domestic window pots and flower pots. The sets are assembled by "plug & play" Snap-in connectors, a modular design flexible for adjustments. The pot drippers are pressure compensated.

### The Features and Advantages of Rain-Tal Compensating Pot-Dripper Sets:

1. Each Pot-Dripper is located at the tip of a 4mm micro-tubing ensuring equal distribution of water and nutrients to each plant irrespective of height, location or distance from the central source.
2. The Pot-Drippers compensate for a wide pressure range (1 to 4 bars) providing an exact discharge.
3. Plug and play connectors enabling to unplug independent units when plants are sold or transferred.
4. The Pot-Drippers are available with discharges of 4L/hr, 2 L/hr.
5. Pot-Dripper sets come pre-assembled and are available in one, two, three, or six outlets.
6. An integral supporting mini-stick which permits accurate and positioning is included.
